

Viraj Kamat

Senior Software Engineer, Backend

Dallas, TX | (631) 202-7996 | viraj.kmt@gmail.com | github.com/viraj-kamat | linkedin.com/in/virajkmt

Professional Summary

Senior Backend Software Engineer with 10+ years designing and operating distributed, high-volume backend services and platform infrastructure in production. Deep Python expertise across microservices, APIs, and shared platforms serving thousands of company-wide users, with strong AWS, Kubernetes, and infrastructure-as-code experience. Skilled in data modeling and relational database performance optimization: query tuning, indexing, caching, read replicas, and partitioning. Proven technical leader through code and design reviews and mentoring engineers on backend best practices.

Skills

Languages: Python (PyTest, Pandas, PySpark), TypeScript, Java, JavaScript (Node.js), PHP, SQL, Shell/Linux

Backend & Distributed Systems: Microservices architecture, REST APIs, gRPC, RabbitMQ/AmazonMQ, event-driven and pub-sub systems (MQTT), Django, Flask, performance optimization, high-availability design

Cloud & Infrastructure: AWS (Lambda, IoT Core, DynamoDB, S3, Aurora RDS, ElastiCache, CloudFormation, CDK, CloudWatch), Docker, Kubernetes, Terraform, infrastructure-as-code

Databases & Performance: MySQL, Aurora RDS, DynamoDB, Redis/ElastiCache caching, MongoDB, Elasticsearch, DB2; data modeling, query and join optimization, indexing, read replicas, partitioning/denormalization

Tools & Practices: Git, Jenkins, GitLab CI/CD, Travis CI, PyTest unit testing, automated testing, DataDog, code reviews, technical mentoring, Agile/Scrum

Experience

The Genie Company | Dallas, TX

Fullstack Engineer, Genie Division | February 2025 – Present

- Own the design and implementation of an AWS Lambda serverless backend processing 10,000+ incoming IoT requests at peak, consumed via AWS IoT Core MQTT publish-subscribe messaging
- Build a core TypeScript library with asynchronous methods to process incoming and outgoing requests at scale, persisting device and event data in DynamoDB with an emphasis on reliability and data integrity
- Provision and deploy cloud resources through infrastructure-as-code using AWS CloudFormation and AWS CDK for repeatable, maintainable infrastructure

Indeed Inc. | Dallas, TX

Software Engineer, Data Science Platforms | January 2022 – July 2024

- Engineered and maintained Indeed's Jupyter Enterprise Gateway platform, a shared internal service enabling 2,000+ users company-wide to run custom Python workloads in Jupyter notebooks
- Developed backend services in Python and Java within a microservices architecture, writing PyTest unit tests to validate Python components
- Optimized relational database performance on Aurora RDS/MySQL: tuning queries and joins, adding indexes, introducing ElastiCache (Redis) caching and read replicas to reduce database load, and monitoring slow queries with DataDog and AWS CloudWatch
- Architected and executed migration of on-premises application components to AWS, lowering infrastructure costs and improving platform stability by 20–30%
- Created Kubernetes deployment configurations and automated production deployments with Terraform, Jenkins CI/CD, and GitLab CI/CD

Goldman Sachs | Dallas, TX

Vice President, Consumer Wealth Management | June 2021 – December 2021

- Engineered ETL pipelines in Python, PySpark, and HDFS over consumer and seller-financing datasets, transforming and merging high-volume data from Kafka, REST, and FTP sources
- Stored processed datasets in AWS S3 in Avro, Parquet, and CSV formats, enabling downstream strategy teams to perform BI analytics
- Automated builds and deployments through GitLab CI/CD

Wayfair | Remote

Senior Software Engineer, Competitive Intelligence | February 2021 – May 2021

- Engineered Google Shopping scraping bots in Python (Django, Scrapy) backed by MySQL to capture competitor product pricing, strengthening pricing competitiveness and sales
- Scheduled bot operations with cron and monitored performance metrics in DataDog

Persistent Systems | Goa, India

Team Lead (IBM Contractor) | August 2014 – August 2019

- Technical lead for IBM's largest blockchain-based billing platform, enabling immutable, transparent storage of billing transactions
- Developed backend services in Python, PHP, and JavaScript (Node.js) within a microservices architecture, processing transactions with scheduled jobs; deployed via Kubernetes/Docker to IBM Bluemix cloud
- Designed relational schemas and data models for new features and optimized MySQL/DB2 performance through query and join tuning, indexing, and table partitioning/denormalization
- Onboarded and mentored 4 junior engineers: delegating tasks, reviewing code, and conducting quarterly performance reviews

Quagnitia Systems Pvt Ltd | Goa, India

Software Engineer | November 2012 – July 2014

- Developed full-stack PHP web applications on the LAMP stack (CodeIgniter, Joomla, WordPress) with MySQL and HTML/CSS/JavaScript frontends, translating overseas client requirements into technical designs

Demerg Systems India | Goa, India

Software Engineer | February 2011 – November 2012

- Built PHP/MySQL web portals for the Governments of Goa and India using MVC design patterns, securing applications against CSRF, XSS, and SQL injection vulnerabilities and meeting accessibility standards

Education

Master of Science, Computer & Information Sciences (Concentration: Data Science), 2020 — The State University of New York at Stony Brook

Bachelor of Engineering, Computer Engineering, 2009 — Goa Engineering College
